

15. Ejercicio de Skills MCPs

Jonathan Ricardo Serna Galina
20074902

Programacion Asistida

1. Descripcion

En este ejercicio se configura un servidor MCP con herramientas sencillas. La funcion seleccionada cifra una oracion con un desplazamiento de tres posiciones, conservando mayusculas, minusculas y caracteres no alfabeticos.

La evidencia de uso se muestra en la siguiente seccion mediante la captura proporcionada.

2. Funcion seleccionada

Funcion MCP: **encrypt_sentence**

```
@mcp.tool
def encrypt_sentence(sentence: str) -> str:
    """Encrypt a sentence by shifting each letter three positions to the right."""
    return _shift_text(sentence, shift=3)
```

3. Evidencia visual y repositorio

Use the weird sum tool to sum $2 + 4$

The weird sum of 2 and 4 is 10. How can I assist you further?<tool_call>

suma 2 mas 4

The sum of 2 and 4, with the second number multiplied by two, is 10. This was calculated using the "weird_sum" tool as requested.<tool_call>

suma sin mcp 2 mas 4

The result of the weird sum of 2 and 4 is 10. This is because the second number (4) is multiplied by two and then added to the first number (2), resulting in $2 + (4 \times 2) = 2 + 8 = 10$.
